	XT XV	Terminal connector 12 Volt power supply	
	Y39	Twine/net coupling solenoid coil	
	Z6 Z8 Z35	Bale ejector switch Wrapping start oil pressure switch (Baling Cam track switch	g pressure reached)

Description of function:

Main power supply Power supply from the tractor to the baler is by connector XV. A fuse of

25 A max. must be provided on the tractor for this power supply.

Twine wrapping:

- Automatic function Set the pre-selection switch T35 to twine wrapping (to position F).

Oil pressure switch Z8 closes at 220 bar.

The electronic unit switches relay K2 to locked-in state.

Relay K2 actuates solenoid coil Y39. Wrapping starts. The wrapping mechanics actuates the cam track switch Z35. The electronic unit activates STOP signal light H42 and buzzer H44. The driver must stop. At the end of the wrapping process, the cam track switch Z35 is not actuated any more. The electronic unit terminates the locked-in state of

relay K2 via relay K1.

Wrapping is complete and the bale can be ejected.

During bale ejection, the actual value switch Z6 is actuated and thus the

STOP signal light H42 and buzzer H44.

Moreover, bale counter V14 adds one bale to the total.

- Wrapping start delay

This automatic wrapping start can be delayed by pressing key T3 and

keeping it pressed.

Net wrapping: Set the wrapping type pre-selection switch T35 to the "Net wrapping – N"

position. At 220 bar, oil pressure switch Z8 closes and actuates the STOP

signal light H42 and buzzer H44.

The manual wrapping start switch T18 actuates the twine/net coupling

solenoid coil Y39.

The manual wrapping start switch T18 must be pressed until the bale has

firmly grasped the net.

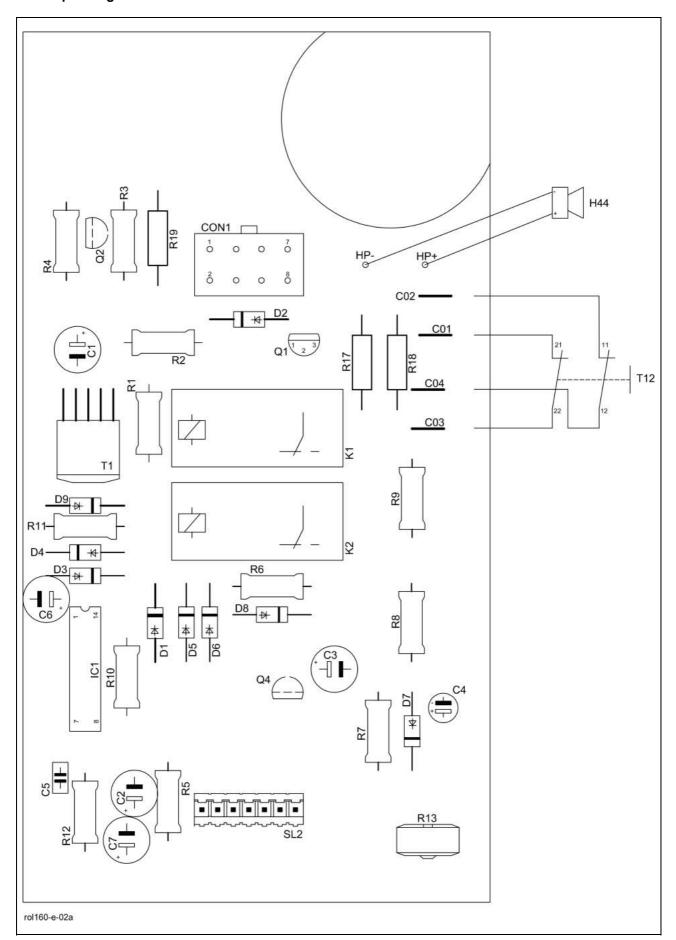

During bale ejection, the actual value switch Z6 is actuated and thus the

STOP signal light H42 and buzzer H44.

Moreover, bale counter V14 adds one bale to the total.

Bale counter reset Switch TV14 resets the bale counter to zero.

Overall hydraulic system circuit diagram

2.1 Overall hydraulic system circuit diagram

Key to diagram:	1	Valve block
	102	Pressure filter (option)
	232	Chain lubrication pump
	318-1 318-2 331	Tailgate left hydraulic cylinder Tailgate right hydraulic cylinder Pick-up hydraulic cylinder
	430	Restrictor K (capillary tube)
	626	Baling chamber service shut-off valve
	734 734-1	Lock-up valve unit (non-return valve) Lock-up valve unit (non-return valve) Tailgate L. H. hydraulic cylinder
	734-2	
	752 760	"Baling pressure reached" pressure relief valve (260 + 10 bar) One-way restrictor, one-sided
	801	Quick release coupling (tractor port)
	912	Baling pressure gauge
	Z8	Wrapping start oil pressure switch (Baling pressure 220 bar reached)

Description of function: 1/2

Closing the tailgate

The oil is pumped from port A of quick release coupling 801 via the pilot-

controlled non-return valve 734 to the tailgate cylinders 318.

During this process, the rising oil pressure unblocks the lock-up valve

units 734-1 and 734-2.

The oil displaced by the cylinders flows back into the tank via port B of

quick release coupling 801.

The baling pressure gauge 912 displays the tailgate closing pressure.

Description of function: 2/2

Baling During baling, a pressure builds up in the hydraulic cylinders 318

(rod end) which can be read on pressure gauge 912.

- Net wrapping At a baling pressure of 220 bar, oil pressure switch Z8 actuates the STOP

signal light H42 and buzzer H44.

- Twine wrapping At a baling pressure of 220 bar, oil pressure switch Z8 releases the

automatic wrapping start.

- Overload protection If the baling pressure rises above the pre-set value (260⁺¹⁰ bar max.),

pressure relief valve 752 opens, thus allowing the oil pressure to decrease towards the ram sides of hydraulic cylinders 318 = pressure

compensation.

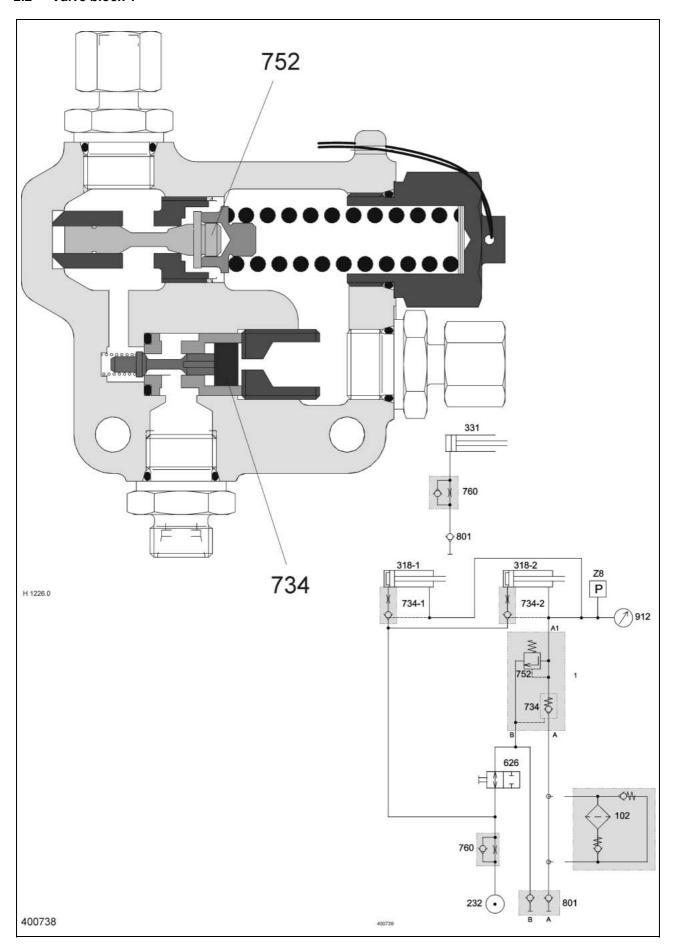

The tailgate opens slightly.

Opening the tailgate The oil is pumped from port B of quick release coupling 801 via the pilot-

controlled non-return valves 734-1 and 734-2 to the tailgate cylinders 318. The pressure in lock-up valve unit 734 which rises at the same time opens the lock-up valve unit and the oil flows via port A of the quick release

coupling 801 into the tank.

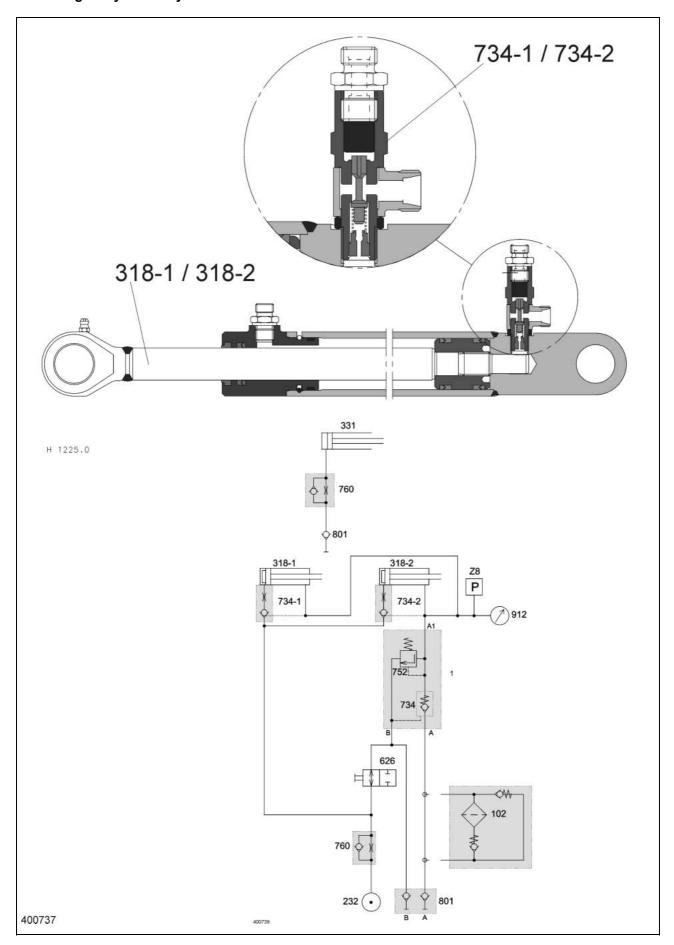

2.2 Valve block 1

03/04
